

SUBJECT INDEX — Volumes 1 and 2

- acute hepatitis viral infection, pathogenesis and serodiagnosis of, 2, 31
- adeno-associated virus, growth in embryo-nated eggs, 2, 287
- adenovirus
 - detection in stool specimens by EIA, 1, 331
 - neutralization of cytotoxin, in Vero cells, 2, 321
 - rapid identification of, 2, 367
- affinity chromatography
 - use in preparation of erythrocyte receptors, 1, 285
 - use to purify bovine diarrhea virus, 2, 293
 - use to purify reverse transcriptase from avian retroviruses, 1, 157
- African green monkey kidney cell line, for production of adeno-associated virus, 2, 287
- agarose gel electrophoresis, separation of M-protein from influenza virus by, 2, 211
- aldehyde fixation, of erythrocytes, for coupling to HBsAg, 2, 269
- alkali-liberated nuclear polyhedrosis virus, gipsy moth, field-flow fractionation, 1, 241
- anti-complement immunoperoxidase, compared to ACIP and ACIF methods for detection of Epstein-Barr virus, 1, 11
- antigenic priming, with influenza virus, previous, detection of, 1, 355
- anti-HBc clinical relevance of, 2, 107
 - detection and significance in the Blood Bank, 2, 119
 - detection by RIA and counterimmuno-electrophoresis, 2, 181
 - in patients with hepatitis B, 2, 97
- anti-HBe
 - EIA for, 2, 85
 - in patients with hepatitis B, 2, 97
- anti-HBs
 - clinical relevance of, 2, 107
 - confirmation of specificity in immuno-radiometric assay, 1, 113
- EIA for rapid detection of, 2, 63
- hybridoma cells secreting, 1, 257
- markers for in immune electron microscopy, 2, 169
- method for coupling erythrocytes for use in passive haemagglutination, 2, 269
- screening of blood donors/recipients for by EIA, 2, 71
- sensitive radiometric assay for detection of, 1, 311
- anti-IgG immunoperoxidase, compared to ACIP and ACIF methods for the detection of Epstein-Barr virus, 1, 11
- anti-IgM conjugate, to detect rheumatoid factor, 1, 1
- antigenic priming, previous, detected by plaque inhibition test, 1, 355
- antigens
 - associated with long-incubation non-A, non-B hepatitis virus, identification and detection of, 2, 127
 - location and quantitation of on the surface of virus-infected cells, 1, 61
 - of rabies virus origins, identification of in brain impression smears, 1, 33
- antiviral antibodies, hen egg yolk as source of to plant viruses in ELISA, 1, 179
- arboviruses
 - effect of some disinfectants on, 1, 27
 - simple serological diagnosis of, 1, 299
- avian adenovirus, used as helper for preparing adeno-associated virus, 2, 287
- avian myeloblastosis virus, purified using affinity chromatography, 1, 157
- avian sarcoma virus, size determination of by antibody-mediated polysome precipitation, 1, 99
- B.95-9 cells, continuous culturing of in the presence of phosphonoacetic acid, 1, 349
- bacterial adherence, specific, for location and

QR355

J68

- quantitation of antigen on the surface of virus-infected cells, 1, 61
- bacteriophage
- lysates, concentration of by filter chromatography, 1, 79
 - rapid concentration of from large volumes of freshwater, 1, 87
 - ϕ X174, electron microscopic studies of, 2, 159
- Blood Bank, detection and significance of anti-HBc and HBcAg in the, 2, 119
- blood products, administration of, followed by development of non-A, non-B hepatitis, 2, 17
- Bombyx mari* (silkworm), use of electron microscopic studies of bacteriophage ϕ X174, intact and 'eclipsing' particles, 2, 159
- bovine diarrhea virus, affinity chromatography of, 2, 293
- canine kidney cells, transformation of by simian virus 40, 2, 331
- cell-mediated cytotoxic responses, 3 H-uridine used to measure, 2, 237
- chicken embryo lethal orphan virus (CELO), used as helper for preparing adeno-associated virus, 2, 287
- chromosome-EBNA interaction, studied by use of new technique for detection of Epstein-Barr nuclear antigen or anti-EBNA antibodies, 1, 11
- chronic liver disease
- persistence of anti-HBc IgM in, 2, 97
 - progression to by cases of acute viral hepatitis and development of in renal and hepatic transplant recipients, 2, 17
- citrus exocortis virus, use in hybridisation studies, 1, 229
- citrus tristeza virus (CTV), antibodies against raised in hen egg yolk, 1, 179
- coliphages MS-2 and T2, concentration of by filter chromatography, 1, 79
- complementary DNA, in immunochemical detection of ds RNA in plants by hybridisation of viral ds RNA to, 2, 277
- complement fixation
- single radial, 2, 261
 - test for assay of specimens for HAV or anti-HAV, 2, 31
- congenital cytomegalovirus infection in newborns, routine screening for, 2, 315
- counterimmunoelectrophoresis
- *comparison of with RIA for the detection of anti-HBc, 2, 181
 - use for identification of protein fractions, 2, 211
- Coxsackie virus rapidly identified by indirect immune electron microscopy technique, 2, 367
- Crotalaria juncea*, lectin isolated from, used in affinity chromatography, 2, 293
- C-type viral glycoproteins, ELISA for detection and quantification of, 2, 357
- CVS, rabies strains, identified by use of monoclonal antibodies, 1, 33
- cytomegalovirus
- antibodies, detection and differentiation of by RIA, 1, 133
 - antigen and antibody, interchangeable ELISA for, 2, 301, 315
 - congenital infection, routine screening of newborns with, 2, 315
- cytotoxin, adenovirus, neutralisation of, 2, 321
- Dane particles, characterisation of, 1, 47
- diarrhea (bovine viral), 2, 293
- disinfectant testing (virucide), 1, 27
- DNA
- complementary, in immunochemical detection of ds RNA in plants, 2, 277
 - orthopox, preparation of from viral cores, 2, 175
- DNA polymerase
- hepatitis B virus, marker of virus replication, 2, 7
 - hepatitis B virus-specific, technique for the detection of, 2, 349
- dye uptake and dilution technique, as a method for measuring growth inhibition by interferon, 1, 197
- 'eclipsing' particles, electron microscopic studies of, 2, 159
- electron microscopy
- congenital infection, routine screening of newborns with, 2, 315
 - in the characterisation of rubella virus revealing haemagglutinin rosettes, 2, 195

- rotavirus, examined by for markers, 2, 169
- studies of bacteriophage ϕ X174 intact and 'eclipsing' particles, 2, 159
- electrophoresis, in the detection of replicating, super-coiled simian virus 40 DNA, 1, 235
- embryonated eggs, growth of adeno-associated virus in, 2, 287
- embryonic kidney cells (human), somatic cell hybrids constructed with, for study of viral gene expression, 1, 139
- encephalocarditis virus, preparation of erythrocyte receptors for by affinity chromatography, 1, 285
- enzyme-immunoassay (EIA)
- compared with RIA for detection of rotaviruses and adenoviruses, 1, 331
 - for HBeAg of enzyme-labelled $F(ab')_2$ and IgG conjugates, 2, 85
 - for rapid detection of HBsAg and anti-HBs, 2, 63
- Hepanostika, for HBsAg, improved, 2, 57
- use in testing for HBsAg and surface antibody, 2, 71
- enzyme-labelled $F(ab')_2$ compared with IgG conjugates in an EIA for HBeAg, 2, 85
- enzyme-linked immunosorbent assay (ELISA)
- for detection and quantification of C-type viral glycoproteins, 2, 357
 - for establishing diagnosis of hepatitis A, 2, 47
- hen egg yolk as source of antiviral antibodies to plant viruses in, 1, 179
- interchangeable, for cytomegalovirus antigen and antibody, 2, 301, 315
- or rubella IgM and IgG antibodies, interference of IgM rheumatoid factor in, 1, 1
- epidemiology, of hepatitis A in Amsterdam, 2, 47
- Epstein-Barr virus
- presence of tested for in lymphoblastoid B.95-8 cells, 1, 349
 - technique for the detection of, 1, 11
- erythrocyte receptors, for viruses, preparation of by affinity chromatography, 1, 285
- erythrocytes
- aldehyde-fixed, coupled to HBsAg for use in passive haemagglutination, 2, 269
 - formalinised chick, used in a simplified diluent system for Japanese encephalitis virus haemagglutination-inhibition tests, 1, 299
 - storage for use in haemagglutination assay, 1, 209
- Fc fragment, of IgG, application of labelled serum for identification of anticytomegalovirus IgG and IgM antibodies, 1, 133
- field-flow fractionation, of alkali-liberated nuclear polyhedrosis virus, 1, 241
- field isolates, of rotavirus, analysis of genome profiles of, 2, 203
- filter chromatography, concentration of bacteriophage lysates by, 1, 79
- floating technique, method for virucide testing, 1, 27
- Flury HEP, rabies strain, identified by use of monoclonal antibodies, 1, 33
- formalinised chick erythrocytes, used in the serological diagnosis of arboviruses, 1, 299
- French beans, in immunochemical detection of ds RNA, 2, 277
- fulminant viral hepatitis, 2, 17
- gastroenteritis, rotavirus from infantile faeces, identified by electron microscopy, 2, 367
- genome profiles, of field isolates of rotavirus, analysis of, 2, 203
- genome, studied by the staining and shadowing method, 2, 159
- gipsy moth (*Lymantria dispar* Linnaeus), field-flow fractionation of alkali-liberated nuclear polyhedrosis virus from, 1, 241
- glycoprotein, C-type viral, detection and quantification of by ELISA, 2, 357
- growth inhibition, by interferon of cells in monolayer, measurement of, 1, 197
- haemagglutination assay, storage of turkey erythrocytes for use in, 1, 209
- haemagglutination-inhibition tests, for Japanese encephalitis virus, 1, 299
- haemagglutination
- immune adherence, 2, 31
 - passive, aldehyde-fixed erythrocytes coupled to HBsAg for use in, 2, 269
 - rosettes, in purified rubella virus, 2, 195
- Hepanostika, for HBsAg, EIA for, 2, 57

hepatitis A

- epidemiology of in Amsterdam, ELISA for diagnosis of, 2, 47
- past, present and future, 2, 1
- pathogenesis and serodiagnosis of acute infection, 2, 31

hepatitis B

- clinical relevance of anti-HBc in, 2, 107
- cross-reactivity between and non-A, non-B used to identify and detect non-A, non-B e antigen, 1, 149

HBsAg, anti-HBe and anti-HBc in patients with, 2, 97

Hepanostika, EIA for diagnosis of, 2, 57

past, present and future, 2, 1

post-transfusion, in the Blood Bank, 2, 119

virus, characterisation of, 1, 47

virus, marker of viral replication, 2, 7

virus-specific DNA polymerase, technique for the detection of, 2, 349

hepatitis B core antigen (HBcAg), 2, 7

- comparison of RIA and counterimmuno-electrophoresis for the detection of, 2, 181

detection and significance of in the Blood Bank, 2, 119

hepatitis B e antigen (HBeAg)

- comparison of enzyme-labelled F(ab')₂ and IgG conjugates in an EIA for, 2, 85

in patients with hepatitis B, 2, 97

see also HBcAg, 2, 7

hepatitis non-A, non-B virus

clinical aspects, 2, 17

HBsAg identified by use of the cross-reactivity between hepatitis B and, 1, 149

long incubation, identification and detection of, 2, 127

hepatitis B surface antibody

in patients with hepatitis B, 2, 97

production of monoclonal antibodies against, by somatic cell hybrids, 1, 257

see also HBcAg and HBeAg, 2, 7

hepatitis B surface antigen (HBsAg)

aldehyde-fixed erythrocytes coupled to for use in passive haemagglutinin, 2, 269

confirmation of specificity by neutralisation in immunoradiometric assay for, 1, 113

EIA for rapid detection of, 2, 63

Hepanostika, an EIA for, 2, 57

in the Blood Bank, 2, 119

immunoradiometric assay for detection of, 1, 311

-negative chronic active hepatitis, non-A, non-B, an aetiological factor in some cases of, 2, 17

status and significance of testing for, by EIA, 2, 71

virus-specific DNA polymerase, modified technique for detection of, 2, 349

hepatitis B surface antigen carriers

anti-HBc detected in the sera of, 2, 107

detection of hepatitis B virus-specific DNA polymerase in, 2, 349

hepatitis B virions purified from the sera of, 1, 47

persistence of anti-HBc IgM in, 2, 97

herpes simplex virus

in study of single radial complement fixation, 2, 261

production of hybrid cell lines secreting antibodies to, 2, 223

virions and nucleocapsids, separation of on Percoll gradients, 1, 303

hybrid cell lines, secreting antibodies to herpes simplex, production of, 2, 223

hybridoma cells

detection of monoclonal influenza antibodies by, 1, 275

secreting anti-HBs, 1, 257

IgG

anticytomegalovirus, assayed by radioimmunological method, 1, 133

anticytomegalovirus, demonstrated by an interchangeable ELISA, 2, 301, 315

anti-rubella, ELISA of, 1, 1

conjugates, EIA for HBeAg, 2, 85

IgM

anti-HBc, in patients with hepatitis B, 2, 97

anticytomegalovirus, assayed by radioimmunological method, 1, 133

anticytomegalovirus, demonstrated by an interchangeable ELISA, 2, 301

anti-rubella, ELISA of, 1, 1

rubella-specific, tested for by solid-phase immunosorbent haemadsorption test, 2, 341

immune adherence haemagglutination, for assay of larger numbers of specimens for HAV or anti-HAV, 2, 31

- immune electron microscopy
 - the use of markers in, 2, 169
 - solid phase, specific migration on the grid associated with, 1, 325
 - methods for the detection of HAV, 2, 31
- immunoassays, for the detection of HAV, 2, 31
- immunoperoxidase, anti-IgG, technique for detection of Epstein-Barr virus, 1, 11
- immunoradiometric assay, *see* radioimmunoassay
- immunosorbent haemadsorption, solid-phase, test for rubella-specific IgM, 2, 341
- impression smears, of brains from infected animals, presence of antigens of rabies origin in, 1, 33
- inclusion bodies, isolation and purification of, 1, 241
- indirect immune electron microscopy, for rapid identification of viruses, 2, 367
- indirect immunofluorometric assay, solid-phase, detection of monoclonal influenza antibodies with, 1, 275
- infectious bronchitis virus, disruption of with Triton X-100 detergent, 1, 121
- influenza virus
 - detection of previous antigenic priming with, 1, 355
 - in study of single radial complement fixation test, 2, 261
 - method for purification of human erythrocyte receptors for, 1, 285
 - monoclonal antibodies to, synthesised by hybridoma cells, 1, 275
 - plaque assay for in Madin-Darby canine kidney cells, 1, 117
 - separation of M-protein from by agarose gel electrophoresis, 2, 211
- intact particles, of bacteriophage ϕ X174
 - electron microscopic studies of, 2, 159
- interferon
 - for antiviral therapy, 2, 7
 - method for measuring growth inhibition by, 1, 197
 - murine leukemia virus yield-reduction semi-microassay for, 1, 167
- IUDR inhibition, cells made impermissible by, 2, 321
- Japanese encephalitis virus, haemagglutination-inhibition tests, diluent system for, 1, 299
- lectin, *Crotalaria juncea*, affinity chromatography of bovine viral diarrhoea virus on, 2, 293
- Lymantria dispar* Linnaeus, gipsy moth, field-flow fractionation of alkali-liberated nuclear polyhedrosis virus from, 1, 241
- lymphoblastoid B.95-8 cells, continuous culturing of in the presence of phosphonoacetic acid, 1, 349
- lysates, bacteriophage, concentration of by filter chromatography, 1, 79
- Madin-Darby canine kidney cells, simplified plaque assay for influenza viruses in, 1, 11
- mammalian RNA tumour viruses, production of in serum-free culture medium, allowing rapid RNA subunit purification, 1, 213
- markers, use of immune electron microscopy, 2, 169
- measles virus RNA, high-specificity radiolabelled 50S, preparation and characterisation of, 1, 223
- metrizamide, in purification of infectious rubella virus, 2, 141
- microassay, for the titration of human respiratory syncytial virus, 1, 343
- monoclonal antibodies
 - against HBsAg, production of by somatic cell hybrids, 1, 257
 - CVS, rabies strains, identified by use of, 1, 33
 - to herpes simplex virus type 2, secreted by hybrid cell lines, 2, 223
 - to influenza, detection of with a solid-phase indirect immunofluorometric assay, 1, 275
- Mount Elgon bat virus, direct plaque assay for, 1, 201
- M-protein, separation of from influenza virus by agarose gel electrophoresis, 2, 211
- murine leukaemia virus yield-reduction semi-microassay for interferon, 1, 167
- neonates with congenital cytomegalovirus, routine screening of, 2, 315

- non-ionic detergent β -D-octylglucoside, in sucrose density gradient for characterisation of rubella virus, 2, 195
- nuclear antigen, Epstein-Barr, characterisation of, 1, 11
- nuclear polyhedrosis virus from gipsy moth, field-flow fractionation of, 1, 241
- nuclear T-antigen, contained in transformed cells of SV40, 2, 331
- nucleocapsids of herpes simplex virus, separated on Percoll gradients, 1, 303
- nucleoprotein complexes, prepared from vaccinia virions irradiated with UV light, 1, 185
- β -D-Octylglucoside, non-ionic detergent, for characterisation of rubella virus, 2, 195
- orthopoxvirus DNA, preparation of, 2, 175
- papova virus, use in construction of somatic cell hybrids, 1, 139
- parainfluenza, type 3-infected target cells, measurement of cytotoxic responses against, 2, 237
- pathogenesis, of acute hepatitis A virus, 2, 31
- Percoll gradients, separation of herpes simplex virus virions and nucleocapsids on, 1, 303
- phosphonoacetic acid, continuous culturing of B.95-9 cells in the presence of, 1, 349
- plant viruses, comparison of two, 1, 179
- plaque inhibition technique, for assay of antibodies to influenza virus, used to detect previous antigenic priming with influenza virus, 1, 355
- polysome precipitation, antibody-mediated, as a method for size determination of viral mRNA species, 1, 99
- pseudoreplica method, of electron microscopy, evaluated as a rapid screening technique for detection of cytomegalovirus in neonates, 2, 315
- rabbit antisera, homologous and heterologous, for neutralisation of human adenovirus by CPE inhibition, 2, 321
- rabies virus infection, diagnosis of by use of monoclonal antibodies, 1, 33
- radioimmunoassay (RIA)
compared to counterimmunoelectrophoresis for detection of antibody to HBcAg, 2, 181
compared with EIA for detection of human
• rotaviruses and adenoviruses, 1, 331
for detection and differentiation of cytomegalovirus antibodies, 1, 133
for detection of HBsAg, 1, 311
for HBsAg, confirmation of specificity by neutralisation in, 1, 113
- rheumatoid factor, interference of in ELISA of rubella IgM IgG antibodies, 1, 1
- respiratory syncytial virus, human, microassay for the titration of, 1, 343
- ribavirin, antiviral activity of, 2, 7
- RNA
ds, immunochemical detection of in plants, 2, 277
high-specific activity radiolabelled 50S measles, preparation and characterisation, 1, 223
messenger, size determination of by antibody-mediated polysome precipitation, 1, 99
³²P-labelling of viroid for hybridisation studies, 1, 229
subunit, rapid purification of, 1, 213
T₄ ligase, 2, 203
- rosettes, rubella virus haemagglutinin, 2, 195
- rotavirus
comparison of EIA and RIA for detection of from stool specimens, 1, 331
examined by immune electron microscopy for markers, 2, 169
field isolates of, method for analysing genome profiles of, 2, 203
from infantile gastroenteritis faeces, identified by immune electron microscopy, 2, 367
- Rous sarcoma virus, purification of reverse transcriptase from, 1, 156
- rubella
ELISA of, IgM and IgG antibodies, interference of IgM rheumatoid factor in, 1, 1
purification of infectious virus, comparison of two methods, 2, 141
-specific IgM, solid phase immunosorbent haemadsorption test for, 2, 341
virus haemagglutinin rosettes, characterisation of, 2, 195

- scanning electron microscopy, for location and quantitation of antigen on the surface of virus-infected cells, *1*, 61
- screening of blood donors/recipients
by improved EIA for HBsAg, *2*, 85
for HBsAg and anti-HBs by EIA, *2*, 71
in the Blood Bank, *2*, 119
- screening, routine, of newborns with congenital cytomegalovirus infection, by electron microscopy, *2*, 315
- semi-microassay, murine leukaemia virus yield-reduction, for interferon, *3*, 167
- Sephacrose 2B
compared to gradient centrifugation for purification of infectious rubella virus, *2*, 141
coupled to *Crotalaria juncea* for purification of bovine diarrhea virus by chromatography, *2*, 293
for purification of reverse transcriptase, *1*, 156
- serodiagnosis, of acute hepatitis A virus, *2*, 31
- serum-free culture medium, production of mammalian RNA tumour viruses in, to allow rapid RNA subunit purification, *1*, 213
- silkworm *Bombyx mori*, use of electron microscopic studies of bacteriophage ϕ X174 intact and 'eclipsing' particles, *2*, 159
- simian virus 40,
replicating, super-coiled, detection of by electrophoresis, *1*, 235
transformation of canine kidney cells by, *2*, 331
- single radial complement fixation test, application to serological diagnosis of viruses, *2*, 261
- sodium metrizoate, in purification of infectious rubella virus, *2*, 141
- solid phase
competitive RIA for anti-HBc, *2*, 181
immune electron microscopy, associated with SMOG, *1*, 325
immunoradiometric assay for HBsAg, *1*, 311
immunosorbent haemadsorption assay, for rubella-specific IgM, *2*, 341
indirect immunofluorometric assay for detection of monoclonal influenza antibodies, *1*, 275
- RIA for determination of susceptibility of varicella, *2*, 149
- somatic cell hybrids
constructed with embryonic kidney cells, for study of viral gene expression, *1*, 139
papova virus, use in construction of, *1*, 139
production of monoclonal antibodies against HBsAg by, *1*, 257
- stool specimens
comparison of EIA and RIA for detection of human rotaviruses and adenoviruses from, *1*, 331
in acute phase of hepatitis A, *2*, 31
- subviral particles, preparation of from vaccinia virions irradiated with UV, *1*, 185
- syncytium formation, titration of human respiratory syncytial virus by, *1*, 343
- tobacco mosaic virus
in detection of ds RNA in plants, *2*, 277
in method of raising antibodies against plant viruses, *1*, 179
- tobacco ringspot virus, in detection of ds RNA in plants, *2*, 277
- T₄ RNA ligase, used to visualise genome RNA profiles of field isolates of rotavirus, *2*, 203
- transplant recipients, in non-A, non-B hepatitis patients, *2*, 17
- Triton X-100 detergent
for disruption of infectious bronchitis virus, *1*, 121
treatment of purified rubella virus with, *2*, 195
- tumour viruses, mammalian RNA, production of allowing rapid RNA subunit purification, *1*, 213
- turkey erythrocytes, storage of for use in virus haemagglutination assays, *1*, 209
- ultrastructure and ultrastructural changes, non-A, non-B hepatitis infection, *2*, 17
- ³H-uridine, used in terminal labelling assay to measure cell-mediated cytotoxic responses against parainfluenza type 3-infected target cells, *2*, 237
- vaccinia virions, preparation of subviral particles from, *1*, 185

varicella

determination of susceptibility to by solid-phase RIA, 2, 149

lack of cross-reactivity with cytomegalovirus, 2, 301

Vero cells

measles virus-infected, used in hybridisation studies, 1, 223

neutralisation of adenovirus infectivity and cytotoxin studies, 1, 349

use in direct plaque assay for Mount Elgon bat virus, 1, 201

viral capsid antigen, Epstein-Barr virus, presence of tested for, 1, 349

viral cores, extracted from virus-infected cell cultures, for preparation of orthopoxvirus DNA, 2, 175

viral gene expression, studied in selection of

somatic cell hybrids, 1, 139

viral glycoprotein

contained in rubella virus haemagglutinin

• rosettes, 2, 195

C-type, detected and quantified by ELISA, 2, 357

virions and nucleocapsids of herpes simplex separated on Percoll gradients, 1, 303

viroid RNA, ³²P-labelling of, for hybridisation studies, 1, 229

virucide testing, new method for, 1, 27

virus-specific DNA polymerase, to hepatitis B, detection of, 2, 349

WHO anti-HBs standard, for sensitivity comparisons in evaluation of RIA and EIA, 2, 63
